

FOR IMMEDIATE RELEASE

Segmented Project Design Kicked up Another Notch!

SPP version 2.4

Arroyo Grande, CA – September 18, 2006 – Driven to improvement by the ideas and suggestions of over 1100 users world-wide, SegmentedTurning.com announces the newest release of its software design tool for segmented wood turners. This new release complements already comprehensive support for all phases of segmented project design from initial shape to final adornment and all the calculations needed to specify segment cutting.

Specifically included are:

- improved segment painting with pictures for better representations of final project appearance
- smooth-curve walls and shapes for designs with more flowing curves
- expanded and more logical menu item groupings to allow multiple ways of accessing program functions.

These new changes join an already large list of functions and capabilities including:

- Mosaic Designs
- ZigZag Design
- Diamond Designs
- Open Segments
- Vertical Spacers
- AutoBowl
- Sketch-A-Bowl
- Ring Master support
- templates for angles, segments, and rings.

The result is a more productive design tool.

According to Bill Kandler, creator of the software and an accomplished segmented turner, “These enhancements really round out the program’s functions and make it easier to use and really fun to come up with new designs.”

As always, this new release is free to existing program customers via a download from our web site (<http://www.segmentedturning.com/upgrdspp.exe>) and pricing remains at \$39.95 for the installation CD.
