FOR IMMEDIATE RELEASE

Segmented Project Design Keeps Pace with Microsoft!
SPP version 2.5

Arroyo Grande, CA – March 27, 2007 – As a result of unfortunate decisions made by Microsoft, most current software does not run properly on the new Vista operating system. SegmentedTurning.com announces the newest release of its software design tool for segmented wood turners to make it fully compatible with Vista.

Specifically included are:

- Support for Microsoft's new Vista OS.
- Protect project printing against zero diameter layers.
- Correct Diamond & ZigZag Designers on when to update display.
- Modify ring display orientation for Current Ring & Local Rings modes. This makes picture agree with underlying math so segments can be accurately selected.
- Protect stagger from illegal values. Max is 50% or Miter Angle.
- Modify side view displays to show current layer number in bold red. Remove left side layer numbering from project outline display.

According to Bill Kandler, creator of the software and an accomplished segmented turner, "These changes are crucial to keeping the Segmented Project Planner fully functional as users migrate to the new operating system."

As always, this new release is free to existing program customers via a download from our web site (http://www.segmentedturning.com/upgrdspp.exe) and pricing remains at $39.95 for the installation CD.
